EDUCATION

Purdue University, West Lafayette, IN

August 2022 – May 2026

Bachelor of Science in Cybersecurity | Minor in Forensic Science | GPA 3.4/4.0

- Semester Honors and Dean's List Fall 22, Fall 23, Fall 25

Relevant Coursework - Incident Response Management, Vulnerability Analysis & Testing, Network Security, Applied Generative AI in Mobile Computing, Object Oriented Programming, Software Development Concepts

CERTIFICATIONS

CompTIA Security+ | CompTIA CySA+ | AWS Cloud Practitioner | Splunk Core User

EXPERIENCE

CapitalOne – Cybersecurity Engineer Intern

June - August 2025

- Developed a Retrieval-Augmented Generation model using Google Gemini and Python to accelerate threat intelligence retrieval for internal security teams, cutting information lookup time by ~40%
- Built an interactive phishing training simulator to promote cybersecurity awareness among 10,000+ employees. Integrated real-world phishing scenarios and safety tips. Awarded 2nd place at the Capital One Students & Grads Hackathon

Purdue University – Associate Risk Analyst

August 2025 - Present

- Conducted risk assessments across enterprise systems to identify vulnerabilities, misconfigurations, and compliance gaps
- Supported remediation planning and policy updates to align with PCI DSS and HIPAA frameworks
- Conducted vendor security reviews to evaluate third party applications for compliance with Purdue's information security standards

SKILLS

Security & Tools: Metasploit, Kali Linux, Wireshark, Nmap, Splunk, Burp Suite, Nessus, Suricata, Wazuh, Velociraptor, OpenCanary

Languages: Python, Java, Bash, SQL

Platforms: AWS, Linux, Microsoft Active Directory

Frameworks: SOC2, ISO 27001, NIST, PCI DSS, HIPAA, MITRE ATT&CK, CMMC, Cyber Kill Chain

RELEVANT PROJECTS

- **Enterprise Detection & Response** – Built and defended a multi-segment enterprise network by deploying a layered detection stack across Window and Linux systems and performed live incident response against simulated adversary attacks using the NIST cybersecurity framework
- **Offensive Security Lab** - Conducted offensive security attacks in a controlled lab environment using Kali Linux, Metasploit, and more to identify and exploit vulnerabilities across network targets
- **Digital forensics Investigation** - Used digital forensics tools such as Autopsy and Wireshark to analyze artifacts and network traffic to identify the origin of a simulated cyberattack
- **Enterprise Active Directory Environment** - Worked with a team to design, build, and administer a Windows Active Directory based enterprise application environment using Windows client and server systems in a virtualized setting
- **Raspberry Pi “Pi-hole”** - Engineered a VPN gateway and network wide ad blocker on a Raspberry Pi 4 using Python and Linux, improving home network privacy and reducing unwanted traffic
